                                                                                                                                                                                                                                                                                                          secreted, active contracts to a method the plasminogen activator (FPA), Kringle 2 serine protease molecule (K2S) or their variants in prokaryotic cells by expressing the protein-encoding DNA operably linked to DNA coding for signal peptide OmpA. The method is useful for producing recombinant DNA-derived tPA, K2S or their variants. Sequences of the invention are useful for manufacturing a medicament for treating stroke, cardiac infarction, acute myocardial infarction, pulmonary embolism, any artery occlusion such as intracranial artery occlusion (e.g., arteries supplying the brain, peripherally occluded arteries, coronary artery occlusion, deep vein thrombosis or related diseases associated with unwanted blood clotting. The present sequence is a DNA encoding a fusion protein comprising OmpA and K2S protein.
                                                                                                                                                                                 activator, Kringle 2 serine protease in prokaryotic cells by expressing the protein-encoding DNA operably linked to DNA coding for signal
                                                                                                                                                                                                                                                                                                invention relates to a method of producing extracellularly

                                                                                                                                                                                                                      This sequence encodes a non-glycosylated tPA deriv. lacking the finger- and EGF-domains. The polypeptide has a lower clearance rate (longer half-life) than natural tPA while retaining thrombolytic activity and stimulation by fibrin. (Updated on 09-JAN-2003 to add missing OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New non-glycosylated form of tissue plasminogen activator - with thrombolytic activity and long plasma life
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                                                                                                                                                                One N-glycosylation site, i.e. NSS (117-119) is substituted with NSM and the N-glycosylation is removed.

Plasmid encoding the modified tPA is 99-6300 and its transformant is E.coli RR1-Zem 99-6300 (FERM P-9127).

This modified tPA, used to treat thrombosis, is of high quality and has a longer half life period in blood.

                                                                                                                                                     It is modified in the patent by replacing one or more codons specifying a positively charged amino acid. The resulting analogues are inserted into a replicable expression vector which is used to transform or transfect a host cell which is grown to express a t-ph analogue. The t-ph analogue is useful for the treatment of diseases or disorders associated with the formation of thrombi in blood vessels e.g. infarctions, thrombosis and embolism. The analogue, in the 1-chain form, exhibits the properties of a proenzyme; however on plasmin-catalysed cleavage of the one-chain form, the activity of the 2-chain form is fully retained. Compared to native t-PA, it has a higher fibrin selectivity, this results in a fibrinolytic agent with a higher fibrin selectivity, as the fibrinogenolytic activity induced by the analogue is reduced (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1049

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A cDNA clone of human tissue plasminogen activator (tPA) was amplified by PCR using the primers given in AAQ87368-69. The amplified tPA DNA (AAQ8730) was ligated into vector KS+ to obtain plasmid TPA-KS+. The construct was used in combinatorial methods involving RNA splicing-mediated shuffling of tPA domains implasmid pINVI (AAQ87347) to generate novel tPAs having improved thrombolytic properties.

```
The present sequence represents the human tissue plasminogen activator gene. It was used to construct plansid TPA-KB+, which is used in the course of the invention. The specification describes a purified creverse-splicing introm which comprises a segment comprising a 5 rpart of a group II introm, including an exon binding site not 3 rpart of a group II introm, including a domain V motif, a branch site acceptor, and a nucleophilic group for transesterifying a phosphodiester bond of an RNA. Together the two segments form an contractalytic Y-branched introm which catalyses integration of at least the reverse-splicing introms which catalyses integration of at least the reverse-splicing introms are used, by specific cleavage and ligation of discontinuous nucleic acid, to generate new genes and gene products, c.g. ribozymes (for use in gene therapy or as reagents in DNA manipulation, e.g. replacements for restriction enzymes) or immunologically active or signal-transducing proteins such as antibody immunologically active or signal-transducing proteins such as antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Reverse splicing construct containing fragments of autocatalytic introns - able to cleave and ligate discontinuous nucleic acid for generating new genes and e.g. ribozymes, libraries of enzymes and antibodies
                                                                                                                                                                                                           finger-like domain"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ATTACTGCCGGAATCCTGATGGGGATGCCAAGCCCTGGTGCCACGTGCTGAAGAACCGCA 295
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The patentors claim a novel recombinant human t-PA which is resistant to specific enzymatic cleavage because it is stabilised by site-directed mutagenesis at a 2-chain cleavage site. Partic. the natural Arg at position 275 is replaced by Gly or Glu, or 11e at position 276 is replaced 75 is replaced by Gly or Glu, or 11e at position 276 is replaced (275 and 276 refer to the posn. of the AAB in the mature protein; i.e. AAB 310 and 311 of AAP60790). Also new are (1) DNA sequences; (2) expression vectors; and (3) microorganisms and cell cultures transformed with these vectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CCCAGGCGCCTCTGAGGGAAACAGTGACTGCTACTTTGGGAATGGGTCAGCCTACCGTG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     115
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               955 GCCTGACGTGGGAGTACTGTGATGTGCCCTCCTGCTCCACCTGCGGCCTGAGACAGTACA 1014
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence was obtained from cDNA prepd. from mRNA extracted from Bowes melanoma cells. The cDNA was used to construct a gene library which was screened with a partial t-PA cDNA clone. Plasmid pKG12 was isolated and shown to comprise the whole coding region for human t-PA as well as 102bp 5'flanking, 760 bp 3'flanking DNA and a poly A tail.

Vector pEMp1-tpa is an example of a vector of the invention. Pref. the blocking element is a promoter sequence oriented with its native disposed proximal to the enhancer element and its 5' end disposed distal to the enhancer element. Alternatively the interposed blocking element comprises a promoter sequence with its 5' end disposed broximal to the enhancer element and, at its 3' end, a gene encoding for a different protein of interest, (see FT). The vector pEMp1 was constructed by inserting an enhancer-blocking element into pEM1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             吕
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TPA CDNA fragment was inserted into the unique XhoI site present in both pEM1 and pEM1. Of 26 transformants obtd. with pEM1-tpa, 5 produced TPA at levels of 140-500 IU/ml. Of 16 transformants obtd. with pEMp1-tpa, 7 produced TPA at levels of 1000-6000 IU/ml. (Updated on 31-0CT-2002 to add missing OS field.)
                                                                                                                                                                                                                                                                         chain (IgH)"

                                                                                                                                                                                                                                                               3'UTR
RESULT 14
AAN81970
```

```
The plasmid was prepd by cleaving the very long 3' UT of t-Ph cDNA (which causes mRNA instability) 34 nucleotides downstream of stop codon and inserting it into a pEMp1 vector. The pEMp1 vector was constructed from the following components (see feature table):

(a) a 2.25 PvuII-BamHI fragment from pSV2-gpt contg. the SV40 enhancer and early region promoter, the E.coli gpt gene, the SV40 small tumour antigen intervening sequence, and the SV40 termination and polyadenylation signals;

(b) a 2.3 kb PvuII-BcoRI fragment from pBR32 contg. the ampicillinase gene and the bacterial origin of replication;

(c) a 0.3 kb PvuII-BcoRI fragment contg. an Ig heavy chain enhancer;

(d) a 0.2 kb SacI-BgIII fragment contg. the metallothioneine I romoter;

(e) a 0.4 kb AvaII-HaeIII fragment contg. the 1g light chain promoter,

(f) a 0.26 kb xbal-bscNI fragment contg. the Ig light chain promoter,

TATAA sequence, and the initiation site.

The expression plasmid can be used to transform host cells esp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              933 GCCAGCCTCAGTTTCGCATCAAAGGAGGCTCTTCGCCGACATCGCCTCCCACCCCTGGC 992

                                                                                                                                                                                                                                                                                                                                                                            A DNA construct (AAT27586) codes for a novel plasminogen activator (AAR96222) in which the kringle KI domain (AAR96221) of plasminogen replaces the native KI domain of tissue plasminogen activator (tPA) (AAR96220). It was obtd. by inserting a synthetic plasminogen KI domain DNA (AAT27586) into tPA DNA and can be expressed in transforated Becherichia coli RRI cells (FEMA P9272). Novel plasminogen activators are produced that show increased clot lysing specificity or plasma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      .;

US-08-883-795A-39
US-08-883-795A-39
Sequence 39, Application US/08883795A
Patent No. 5985607
GENERAL INFORMATION:
APPLICANT: Delcuve, Genevieve
APPLICANT: Delcuve, Genevieve
TITLE OF INVENTION: Recombinant DNA;
TITLE OF INVENTION: Vectors for Tiss
NUMBER OF SEQUENCES: 39
CORRESPONDENCE ADDRESS:
ADDRESSE: BERESKIN & PARR
STREET: 40 King Street West
                                                                                                                                                                                                                536
                                                                                                                                                                                                                                        1109
                                                                                                                                                                                                                                                                                           1169
                                                                                                                                                                                                                                                                                                                                                1229
